Low Soil Moisture

Soil moisture is below threshold

Source: Soil Sensor 2

Zone: North Field

Value: %18 | Threshold: %20

Time: 11.05.2026-10.40

Low Battery Warning

Battery level is getting low.

Source: Node Controller N1

Zone: West Field

Battery: %27 | Threshold: %40

Time: 11.05.2026-09.50

Communication Failure

No data received from node.

Source: Gateway Node

Zone: East Field

Status: No data received.

Last Signal: 11.05.2026-09.20

Alert Details

Alert Type: Low Soil Moisture

Status: Active

Critical: High

Zone: North Field

Sensor: Soil Sensor S2

Parameter: Soil Moisture

Current Value: 18%

Threshold Value: 20%

Detected Time: 11.05.2026 10:40

Autonomy Mode: Semi-Auto

Suggested Action: Irrigation recommended

System Note: Soil moisture is below the safe threshold level.

System Insights

- North Field moisture dropped below threshold once this week.
- East Field has the highest water usage.
- Sensor S2 battery is below recommended level.
- System uptime is within target range.

Status: Draft

Current Weekly Report

Report Period: 11.05.2026 - 17.05.2026

Summary:

BioPulse monitored 6 sensors across 4 field zones. The system detected 18 alerts, including 4 critical alerts.

Autonomous irrigation was triggered 7 times. Estimated water saving compared to manual irrigation: 18%.

Water usage decreased by 12% compared to last week.

Main Findings:

- North Field had the lowest average soil moisture.
- East Field had the highest water usage.
- Soil Sensor S2 battery level is below recommended level.
- System uptime stayed within the target range.
