

SE 216 – SOFTWARE PROJECT MANAGEMENT

STAKEHOLDERS DOCUMENT

PROJECT NAME: BioPulse : Autonomous Green Ops Platform

GROUP MEMBERS: Umutcan Yavuz, Kaan Pamuk, Erdi Sinan, Ahmet Yiğit Sertel, Ata Çelik, Onur Özbek, Enes Görkem Hasgör

#	STAKEHOLDER	DESCRIPTION
1	Project Development Team	The BioPulse architecture, MongoDB database, end-to-end encryption, and 3D Digital Twin are all being coded by a seven-person software engineering team.
2	Agricultural Enterprise Owners (Farmers)	The final consumers who will directly profit from greater crop yields, water savings, and autonomous irrigation decisions.
3	Ministry of Agriculture and Forestry	Reports on water use, agricultural productivity, and environmental sustainability are issued by the official regulatory agency (Statutory Audit).
4	Hardware Suppliers	Businesses that supply the "Industrial Hardware Shielding" phase's physical sensor nodes, shields, and smart water valves.
5	Weather API Providers	Real-time meteorological data is provided by global cloud services for the "External Weather API Integration" to enable independent decision-making.
6	Telecommunication Operators	Companies supplying the SIM/IoT network infrastructure for seamless connection during the "Switch between wifi and sim network" phase.
7	Cloud & Database Service Providers	MongoDB Atlas and related cloud hosting services provide secure database infrastructure, real-time storage, backup, and backend API support for continuous telemetry processing.
8	Agricultural Engineers and Consultants	For the "Plant weather forecast-based irrigation decision logic" system, experts are supplying scholarly data on plant biological thresholds.
9	Project Sponsors / Investors	R&D (Research and Development), prototype production, and hardware procurement are funded by individuals or groups with the goal of achieving commercial success.
10	Environmental Protection Agencies (NGOs)	Non-governmental groups that supported the system's ESG standards concentrated on Green Operations and efficient water use.
